

PRD TEMPLATE: Trust & Safety Tooling for Market Expansion

Status: Author: Market:
Last updated:

Problem

Expanding the platform to a new market requires adapting Trust & Safety tools to local regulations, languages, and product rules. Without a repeatable, documented process, each expansion starts from scratch — creating inconsistency, delays, and knowledge loss between rollouts.

The same questions come up every time:

- How do we handle currency conversion in fraud detection logic?
- What product categories are restricted or prohibited in this country?
- How do we adapt content moderation for a new language?

Market-specific context:

High Level Approach

Use this template as the single source of truth for each expansion. Every decision, open question, and sign-off is documented here — not in Slack, not in someone's head.

Each checklist item maps to a Jira ticket. No ticket closed = no item complete.

OKRs

Objective: Successfully expand T&S tooling to with no increase in fraud rate and full regulatory compliance at launch.

Key Result	Target	Measurement
T&S tools ready before market launch	100% checklist complete T-2 weeks	Jira tickets closed
Fraud rate in new market ≤ existing market average	≤ [X] % at 90 days	Analytics dashboard
Escalations caused by missing localization rules	0 critical in first 30 days	Ops incident log
Regulatory sign-off obtained	Legal approval documented	Decision log in this PRD

Narrative

Today (without this playbook): A new market is announced. The T&S PM scrambles to identify what needs to change — currency rules, prohibited categories, language adaptation. They ask the same questions that were asked during the previous expansion. Answers are buried in Slack threads, old tickets, or the memory of a colleague who may no longer be on the team.

With this playbook: A new market is announced. The PM opens this template, works through each section with legal, compliance, data, and localization, and documents all decisions inline. The next expansion takes half the time.

Non-goals

- We are not rebuilding the T&S tooling architecture for each market
- We are not automating the expansion process end-to-end
- We are not handling payment localization — owned by a separate team
- [Add market-specific non-goals]

Expansion Checklist

Each item below = one Jira ticket. Ticket must be closed before moving to the next phase.

1. Currency & Financial Rules

- ☐ Define how currency conversion affects fraud thresholds — Jira: [TICKET-ID]
- ☐ Confirm local payment methods and associated risk profiles — Jira: [TICKET-ID]

☐ Validate fraud detection rules are calibrated for local GMV levels — Jira: [TICKET-ID]

2. Product Category Rules

- ☐ Review prohibited and restricted product categories per local law — Jira: [TICKET-ID]
- ☐ Map to existing platform category taxonomy — Jira: [TICKET-ID]
- ☐ Flag edge cases for legal review — Jira: [TICKET-ID]

3. Language & Content Moderation

- ☐ Identify language support requirements (moderation, UI strings, alerts) — Jira: [TICKET-ID]
- ☐ Confirm availability of moderation tooling for the language — Jira: [TICKET-ID]
- ☐ Define escalation path for content that cannot be auto-moderated — Jira: [TICKET-ID]

4. Regulatory & Compliance

- ☐ Identify country-specific regulatory requirements — Jira: [TICKET-ID]
- ☐ Confirm reporting obligations to local authorities — Jira: [TICKET-ID]
- ☐ Update DPIA if new data processing activities introduced — Jira: [TICKET-ID]

5. Stakeholder Sign-off

- ☐ Legal — Jira: [TICKET-ID]
- ☐ Compliance — Jira: [TICKET-ID]
- ☐ Data / Analytics — Jira: [TICKET-ID]
- ☐ Operations (T&S team leads) — Jira: [TICKET-ID]
- ☐ Localization — Jira: [TICKET-ID]

Decision Log

All significant decisions documented here. Format:

[Decision] [What was decided] **Rationale:** [Why] **Alternatives considered:** [What else was on the table] **Owner:** [name] | **Date:** [date] | **Reviewed by:** [Legal / Data / other]

Example:

[Decision] Apply the same fraud threshold as the PL market for the first 90 days, then recalibrate based on local data. **Rationale:** Insufficient local data at launch to set independent thresholds. **Alternatives considered:** Set conservative (higher) thresholds from day 1 — rejected due to expected high false positive rate. **Owner:** PM | **Date:** 2024-01-15 | **Reviewed by:** Legal, Data

Open Questions

Question	Owner	Due date	Status
[Question]	[name]	[date]	Open / Resolved

Launch Plan

Phase	Goal	Exit Criteria	Jira Epic
1 — Checklist review	Identify all gaps	All sections reviewed, owners assigned	[EPIC-ID]
2 — Localization & rules	Adapt tools to local context	Legal & compliance sign-off	[EPIC-ID]
3 — Pilot	Soft launch with monitoring	No critical incidents in first 14 days	[EPIC-ID]
4 — Full launch	Market live	KPIs within range at 30 days	[EPIC-ID]

Risks:

Risk	Likelihood	Impact	Mitigation
Regulatory requirements unclear at launch	Medium	High	Engage legal early; document open questions
Moderation tooling doesn't support language	Low	High	Validate in Phase 1
Fraud patterns differ significantly from baseline	Medium	Medium	90-day recalibration checkpoint
[Add market-specific risks]			

Key Milestones

Milestone	Owner	Target date	Jira ticket
Template filled for this market	PM	T-8 weeks	[TICKET-ID]
Legal & compliance sign-off	Legal	T-4 weeks	[TICKET-ID]
Tools adapted and tested	Engineering	T-2 weeks	[TICKET-ID]
Checklist 100% complete	PM	T-2 weeks	[TICKET-ID]
Pilot launch	PM + Ops	T-0	[TICKET-ID]
30-day OKR review	PM + Data	T+30 days	[TICKET-ID]
90-day OKR review	PM + Data	T+90 days	[TICKET-ID]

How We Verify Changes Were Introduced

Rule: Nothing is "done" until the Jira ticket is closed.

- Every checklist item above has a corresponding Jira ticket
- Tickets are reviewed in sprint planning and weekly syncs
- This document is linked in the Jira epic description — it is the single source of truth
- Before moving from Phase 1 → Phase 2, all Phase 1 tickets must be closed
- 30-day and 90-day OKR reviews are scheduled at kickoff, not retroactively

Audit trail:

- Decisions documented in Decision Log above with date and owner
- Open questions tracked until resolved — no question disappears without an answer on record
- Document version history maintained; major changes noted below

Changelog

Version	Date	Change	Author
1.0	[date]	Initial template created	[PM]

Version	Date	Change	Author
[x.x]	[date]	[what changed]	[name]

This is an anonymized template based on real work at a large e-commerce platform. Sensitive business data has been removed or generalized. Built to be reusable across market expansions.
